

MEME SAVER - COMPREHENSIVE RISK DISCLOSURE *Last Updated: August 2026*

Trading digital assets on decentralized exchanges (DEXs) is highly speculative and carries an extreme risk of loss. By using Meme Saver, you acknowledge and accept the following risks:

1. TOTAL LOSS OF CAPITAL RISK The tokens analyzed by Meme Saver (often referred to as "memecoins") generally have no intrinsic value, no underlying business model, and extreme volatility. The value of these assets can drop to zero instantly.

2. SMART CONTRACT AND EXPLOIT RISK Blockchain networks and smart contracts are subject to hacking, exploits, and fatal bugs. Meme Saver's analysis cannot guarantee that a smart contract is safe from malicious code or backdoors created by developers.

3. ALGORITHMIC AND AI LIMITATIONS

- **Probabilistic Nature:** The Meme Saver AI Trust Score is a mathematical estimate based on on-chain heuristics. It is NOT a guarantee of safety.
- **False Positives/Negatives:** The AI may flag legitimate projects as dangerous, or fail to detect sophisticated scams (Sybil networks) that circumvent our current detection models.
- **Latency:** Blockchain data is subject to network congestion. Data displayed on the Meme Saver terminal may be delayed, leading to inaccurate execution if relied upon for high-frequency trading.

4. REGULATORY RISK The regulatory status of digital assets is uncertain globally (including SEC regulations in the US and MiCA in the EU). Legislative changes may negatively impact the utility of the Meme Saver platform or the value of the assets you hold.

5. USER RESPONSIBILITY You are executing trades at your own risk. Meme Saver provides the "radar"; you pilot the ship. We accept absolutely no liability for your trading outcomes.
